

ABSTRACT OF THE DISCLOSURE

A home-delivery method is provided in which the efficiency of delivering parcels can be improved, and a receiver can receive a parcel at a convenient day and time in a convenient place. The method comprises steps of registering consignment information of a parcel to be received by a receiver in a home-delivery server (#14), transmitting parcel information from the home-delivery server to a terminal of the receiver after the consignment information is registered in the home-delivery server and before the parcel is delivered (#15), receiving information about a day, a time and a convenience store that the receiver designates for receiving the parcel by the home-delivery server (#16), and delivering a collected parcel to the convenience store that is designated by the receiver (#17).
